

Capture live occupancy of desks, rooms and space

Gain a clear understanding of workspace utilisation to improve space planning and efficiency

The way we use the workspace has changed beyond the traditional 'one person one desk' as hybrid working has become the norm. The challenge now facing workspace managers is getting the balance right in their buildings. How do you ensure workplace efficiency and satisfy a flexible workforce?

Pressac's smart occupancy sensors can provide detailed near real-time usage data on spaces, people movement and how equipment is being used, to help you plan, manage and optimise your workspaces.

An easy and non-intrusive way to monitor utilisation

While monitoring space usage will undoubtedly become more commonplace in the offices of the future, the introduction of monitoring systems can cause concern for employees. Pressac's smart occupancy sensors are designed to simplify the detection of movement - they don't contain cameras or capture images - so they tell you which spaces are occupied, without invading privacy.

Accurate utilisation data

The sensors are designed to only pick up people within the space, not people walking past. They can also be configured to allow for short absences such as tea breaks.

Easy install

The small sensors simply fix to the underside of the desk, table, wall, ceiling or doorway and send data wirelessly.

Low maintenance

They're ultra-low power, so batteries typically last 5+ years. You can configure occupancy updates every 10 minutes to 5 hours to maximise battery life.

Scalable

A cost-effective way to monitor occupancy across 1000s of desks and rooms in near real time.

Pressac heritage

Over 60 years' experience and technical expertise.

Made in Britain

Designed and manufactured in the UK.

You're in control of your data

- Send your data to your preferred on-premise or cloud platform
- Via Ethernet, LTE (4G) or WiFi
- End-to-end encryption
- No subscriptions or recurring fees
